

What if you could enjoy **great-tasting snacks without guilt** ?

Puffed snacks with Snack Coating REBALANCE™

Snacking is associated with fun and relaxed moments, however it is also brings guilt due to extra fat intake. Knowing that 66% of European consumers surveyed are cutting back on fat in foods and drinks*, snack manufacturers can now offer their consumers guilt-free snacking products.

Our Snack Coating REBALANCE™ concepts offer:

- A **77% fat reduction** resulting in less than 10g fat /100g of puffed snacks thanks to the snack coating with STA-LITE® Polydextrose
- A potential '**high in fibre**' claim through STA-LITE® Polydextrose soluble fibre : 100 grams of puffed snacks containing almost 10 grams of fibre
- An **improved adhesion of seasoning particles** thanks to STA-LITE® Polydextrose, which also contributes to the shininess and the glossiness of the coating
- No compromise on taste, texture or stability.

Our REBALANCE™ formulation service helps manufacturers reformulate for less fat, sugars, calories and salt, without compromising taste.
